

How to use **Botanic Gold?** for head lice and their nits (eggs). Mix 1 part solution, 2 parts water.

1. On a dry head, start applying **Botanic Gold?** by pouring/spraying around the ears and neck and continue until all hair is completely saturated. Work into lather.
2. Comb through the hair to ensure complete coverage.
3. Massage head and comb hair for 30-40 minutes. **Do not rinse and do not allow to dry. (Reapply if necessary to keep moist.)**
4. Rinse Thoroughly. (If hair has tangles, use **Super Slick?** or **unscented** hair conditioner during rinse.)
5. Dry hair with hair dryer while combing, preferably outside so nits are not blown into carpets. Blow drying and combing will help ensure all nits are removed from the hair.
6. Carefully inspect for nits that may be tangled in the hair.
7. Comb with lice comb to remove any remaining lice or nits. Inspect hair with a good ambient light or daylight, daylight is best, to make sure all nits are gone.  
**It is important that all nits are combed or picked out.**

For maintenance, dilute 1 part **Botanic Gold?** with 1 part water, put in spray bottle. Use 3-4 sprays as a daily hair wash for 2-4 weeks, in place of shampoo. For additional protection, lightly spray on collars and shoulders before returning to area of original infestation.

**Important:** If pesticides have been used prior to **Botanic Gold?** treatment, the nits may be harder to comb out. Increase step 3 to 60 minutes, and then proceed as directed above. Again, be sure to remove all nits.

Use a 3-1 solution of **Botanic Gold?** in hot water for laundry.
